Senior program management professional with 15+ years of experience leading end-to-end business and process transformations across manufacturing, finance, supply chain, service and operations. **Former COO & CQO** of a MSME company, experience of working in both manufacturing & service companies like Toyota & Genpact, with hands-on ownership of enterprise outcomes, now partnering with organizations to design **scalable operating models, optimize processes, and deliver measurable business impact.**

What I do:

I work with founders and leadership teams to bring structure, clarity, and execution discipline into their businesses—by designing practical processes, building decision-ready data systems, and introducing simple governance mechanisms that support execution and growth.

How I Work:

- Founder-focused and hands-on approach
- Practical, execution-oriented ideas deployment
- Designed for startups and growing companies
- Flexible engagement aligned to business realities

Engagement Models:

- Diagnostic & roadmap (short-term)
- Program based transformation (3-12 months)
- Fractional COO/ Operations Advisor
- Capability-building & coaching engagements

Engagement Approach:

Diagnose → Design → Deliver → Embed
Diagnose : Data-led assessment of processes, performance gaps, risks, and constraints
Design : Pragmatic, fit-for-purpose solutions aligned to business maturity
Deliver : Hands-on program management with clear milestones and ownership
Embed : Governance, capability transfer, and KPI cadence to sustain results
Focus: *solutions that work in real operating environments—not theoretical frameworks.*

Organizations Consulted: *("Representative engagements; details available on request")*

How I execute:

Business & Process Assessment

I begin by understanding your business as it operates today—your model, workflows, data, and decision practices. This helps identify gaps, inefficiencies, and risks that limit performance or scalability.

Process Mapping & Documentation

I document how work is currently done ("as-is") and design clear future-state ("to-be") process flows aligned to business goals. These blueprints bring clarity across functions and ensure everyone understands how the business runs.

Process Design & Optimization

I design lightweight but structured processes that improve efficiency, reduce ambiguity, and create consistency—without adding unnecessary complexity. The focus is always on what is practical and sustainable.

Data Systems, MIS & Dashboards

I help move organizations from fragmented tracking to structured decision systems by creating master data sheets across departments, dashboards that track key metrics and outcomes. This enables faster, data-backed decisions.

Financial Analysis & Cash Flow Visibility

I work with financial data to analyze trends, improve visibility, and support decision-making. It includes simple cash-flow tracking and linking financial insights to operational priorities.

Business Planning & Strategic Alignment

I use a one-page business planning framework to align leadership on vision, goals, priorities, and metrics. This document becomes the anchor for monthly reviews and long-term planning.

Organization Structure & Role Clarity

As companies grow, unclear ownership slows execution. I help clarify roles, responsibilities, and team structures to improve coordination and accountability.

Reviews, Governance & Performance Tracking

I establish structured review mechanisms to compare plans vs. actuals, track progress, and define corrective actions—helping leaders stay in control and course-correct early.

If you're looking to bring structure, clarity, and repeatability into how your business operates—I'd be glad to help.
